

CHILL CENTER

The Most Comprehensive
Cooling Control Available

The CIDEC Chill Center is the ultimate upgrade for any storage tank.

The 6 inch color touchscreen displays all of the important information like temperature graphs and status of the system. The Chill Center also works as your new chart recorder. The screen can save up to 7 months of data in the temperature graph! Changing paper charts is a thing of the past.

If an Internet connection is available, the Chill Center can be connected to the network so you can access it remotely. You can check the current milk temperature from home or change parameters from your office. In the event of a problem, the system can be configured to send you a text to notify you immediately.

All of the wash and cooling parameters are fully customizable. The parameters can be changed through the touchscreen.

The Chill Center comes with a separate wash box so the electric components are isolated from the water coils. This protects your valuable electronics and isolates them from water.
