

HYDROWAVE WATER SYSTEMS

A Pump System designed as a package to provide intelligent operation while saving you energy costs.

CIDEC SOLUTIONS is proud to produce a fully functional water system to solve your boosting applications.

What is different? We believe that a system should be as simple and flexible as possible. The Hydrowave has a variable speed drive programmed to deliver optimum performance while enabling simple use. Every unit has a touch screen to communicate to the operator.

Installation is as simple as hooking the water into and out of the package and connect the power!

The Hydrowave is the perfect choice for irrigation, wash down hose applications, and primary water boosting.

The Hydrowave can be configured to match needs up to 500 psig and flows to 725 GPM.

All contact metal parts of the multistage pump are made of stainless steel.
